

Open the file 'flappy\_main.py' in your preferred environment (ideally Spyder) and run the game.

- Keep in mind, the game starts straight away when start is clicked so be sure you are ready to press space to make Flappy fly!
- Instructions are found on the splash screen and can be read and closed as you please
- If you are frustrated of flappy touching the pipes all the time and are done playing, go ahead and click the exit button and try another day!
- Have Fun!!!!
